

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for scheduling an event over a network in a calendar of an invitee, the event having a set of details including at least a predetermined time for the event provided by an event creator, the method comprising:

as the result of action by the invitee on a web page published by the event creator for the event, receiving creating a schedule request at a server in communication with the network, the such schedule request including at least ~~the set of details including~~ a predetermined time for the event and an identifier for the event creator, wherein sending the schedule request to a server in communication with the network; the server ~~having~~ has access to the calendar of the invitee and a calendar for the event creator;

creating an event record at the server, the event record including at least the predetermined time for the event ~~set of details~~ and a link to the calendar of the invitee;
and

adding the event to the invitee's calendar.

2. (Original) A method according to claim 1, further including:
creating a link from the event record to the event creator's calendar; and
adding the event to the event creator's calendar.

3. (Original) A method according to claim 1, wherein the network is the Internet.

4. (Original) A method according to claim 2, wherein the invitee's calendar, the event creator's calendar and the event record are stored in a database in communication with the server.

5. (Original) A method according to claim 1, wherein the schedule request is a hypertext transfer protocol request.

6. (Original) A method according to claim 1, wherein the invitee's calendar is part of a personal information management system.

7. (Original) A method according to claim 1, wherein the event creator changes at least one member of the set of details for the event, the method further including:

- updating the event record with the changed set of details; and
- updating the event in the invitee's calendar with the changed set of details using the link between the event record and the invitee's calendar.

8. (Original) A method according to claim 7, further including sending a notification message to the invitee including the changed set of details.

9. (Previously Amended) A method according to claim 1, wherein the action results from invoking a link by the invitee, the link associated with the event on the web page of the event creator.

10. (Currently Amended) A system for scheduling an event over a network in a calendar of an invitee, the event having a set of details provided by an event creator including at least a predetermined time for the event, the system comprising:

- a first link, inserted in a web page associated with the event creator and including the event, that when selected by the invitee creates a schedule request including at least the predetermined time for the event ~~set of details for the event~~ and an identifier for the event creator, the schedule request directing the event to the invitee's calendar;

at least one server, in communication with the network, to receive the schedule request and store the event in the invitee's calendar and in an event record that includes a second link to the invitee's calendar; and

at least one database, in communication with the server, to store the event record.

11. (Original) A system according to claim 10, wherein the schedule request is a hypertext transfer protocol request.

12. (Original) A system according to claim 10, wherein the event is stored in a calendar for the event creator.

13. (Original) A system according to claim 10, wherein the content site is a Web page on the World Wide Web.

14. (Currently Amended) A computer program product ~~for use with a computer system~~ for scheduling an event over a network in a calendar of an invitee, the event having a set of details provided by an event creator including at least a predetermined time for the event, the computer program product comprising a tangible storage computer-useable medium having computer readable code thereon, the computer readable program code including:

program code for ~~receiving creating~~ a schedule request, the schedule request including at least ~~the set of details~~ the predetermined time for the event and an identifier for the event creator, as the result of action by the invitee on a web page published by the event creator for the event ~~at~~ ; ~~program code for sending the schedule request to~~ a server in communication with the network, wherein the server ~~has having~~ access to the calendar of the invitee and a calendar for the event creator;

program code for creating an event record at the server, the event record including at least the predetermined time for the event ~~set of details~~ and a link to the calendar of the invitee; and

program code for adding the event to the invitee's calendar.

15. (Original) A computer program product according to claim 14, wherein the schedule request is a hypertext transfer protocol request.

16. (Original) A computer program product according to claim 14, further including:

program code for creating a link from the event record to the event creator's calendar; and

program code for adding the event to the event creator's calendar.

17. (Currently Amended) A computer program product according to claim 14, wherein the event creator changes at least one member of the set of details, the computer program product further including:

program code for updating the event record with the changed set of details; and

program code for updating the event in the invitee's calendar with the changed set of details using the link between the event record and the invitee's calendar.

18. (Original) A computer program product according to claim 17, further including program code for sending a notification message to the invitee including the changed set of details.
